

# SUPER WHITE

Fluid Inks

## GENERAL DESCRIPTION

**FLUID INKS - PLASTISOL** is an excellent multi-purpose plastisol ink with smooth, easy flowing characteristics for consistent trouble free printing. It is designed as a creamy, high performance ink formulated to provide a matte-down, a soft hand and minimal screen build-up.

## STOCK

100% cotton and 50/50 polyester/cotton blends.

## STENCILS

All types of MadChem emulsions are suitable.

## SCREEN MESH

110 mesh is the popular choice; printers may also employ the use of mesh sizes 60 to 160 mesh or equivalent.

## CURING

Flash at 220°F for 3 - 5 seconds and cure at 300°- 320°F.

## MIXING PROCEDURES

Stir well before using. Suitable for use with reducers and additives.

## CLEAN-UP

MC Multi-wash or MC Press Wash

**WARNING: FOR INDUSTRIAL USE ONLY KEEP AWAY FROM CHILDREN**

## CAUTION

It is necessary to pre-test all fabrics prior to production, due to the various dye application methods. Ink films must be cured properly to give good wash resistance and in some cases to prevent 'post-bleed' due to dye solubility. There is a tendency to under cure ink films to prevent dye migration due to heat, but this will only result in other problems. Some fabrics may need to be pre-heated to "set" the dyes - this is not altogether desirable, but will produce a more thorough cure due to moisture removal as well.

## STORAGE PROCEDURE

Store at 65-90°F, avoiding direct sunlight. Use within one year of manufacturing date.

## NOTE

Please note that all colors are made without the use of lead or heavy metal pigments. CPSIA compliant. The information on this data sheet is based on laboratory tests and production experience. Directions and procedures for use of Triangle-Ink products must be considered as recommendations only. The printer is solely responsible for determining suitability of any Triangle product for a specific application. We recommend that all products be pre-tested prior to production. No warranties are implied or expressed.
